

HARLEQUIN

USAGE INSTRUCTIONS FOR HARLEQUIN LIQUID ROSIN PRODUCT

Harlequin Confidance

This is a liquid rosin which provides surface traction to any hard surface including wood, linoleum and vinyl. Harlequin's vinyl dance floors already have a slip resistant surface, but many studios have a wood surface which may require more surface traction. **A 1 litre bottle should provide coverage for approximately 100m².**

- Prior to usage clean the floor thoroughly to remove dust and dirt.
- Dilute Harlequin Confidance in the ratio of 20:1 with clean water and apply to the floor surface with a damp mop.
- Allow to dry thoroughly.

Floor conditions and requirements differ and the concentration of Harlequin Confidance should be adjusted accordingly. The greater the concentration of Harlequin Confidance, the less slippery the floor will become. Residue left on the surface after drying indicates too high a concentration. If this occurs the product should be removed with hot water and a more dilute solution applied.

Do not apply Harlequin Confidance to any floor already treated with Harlequin Confidance or other liquid rosin products without first removing the old application. Do not mix with any other product.

***As with all cleaning products, please make sure you read the health and safety instructions for each product on the reverse side of the bottle.**
